

Installation Guide for In Motion IM-451X

Desktop Installation method

Place projector between 2-3 meter away from the desired wall or whiteboard.

Use the USB C to A cable for PC connection to the projector

And HDMI to the projector too. The 2 cables must be connected to both equipment at all time during the operation or demonstration.

Please turn on projector for placement of laser curtain

For the laser curtain issued with the projector, please take measurement of the center position on the projected blank screen and minimum height of 7-15 cm above the screen

Ensure the USB cable power is kept above the screen so the power source.

Begin by turn on the In-Motions software and stop any anti-virus software from blocking the function.

Turn on both button on the sensor and you should be able to see the guide laser red line on the floor
